

For Running **Educatly** Project Locally

-Prerequisites:

1. Ensure that you have Node.js installed on your machine. You can download it from nodejs.org. Verify the installation by running `node -v` in your terminal or command prompt. The recommended Node.js version is v18.12.0. which is compatible with angular version 16.2.13.
2. Install Angular CLI globally by running `npm install -g @angular/cli` in your terminal or command prompt. Verify the installation by running `ng --version`. The used Angular version is v16.2.13.

-Setup:

1. Clone the repository using Git by running the following command:

```
git clone https://github.com/kerollos-fessal/Blog-website.git
```
2. Navigate to the project directory by running the following command:

```
cd Blog-website
```
3. Install project dependencies by running the following command:

```
npm install
```

-Running the Application:

-Start the Angular development server by running the following command:

```
ng serve -o
```

note: This command will automatically open the application in your default web browser. If it doesn't open, you can manually navigate to <http://localhost:4200/>

Accessing the Live Demo:

You can also access a live demo of the application deployed on Vercel. Simply visit <https://blog-website-new.vercel.app/home> in your web browser.
